Abstract of the Disclosure

A crib, which is convertible to a plurality of other furniture pieces, has four legs, a front panel, a rear panel, two side panels, and two stabilizing posts. The stabilizing posts are positioned adjacent and parallel to the two legs supporting the front panel. Each stabilizing post is removably engaged to a leg, and is structurally independent of the front panel. All components of the crib can utilized when the crib is converted to another furniture piece, so that no components are discarded.
